Re: Wheeler 1 & 2 UMC #365264 & 365265

Dear Mr. Teseneer:

My original notice to commence mining operations on Wheeler 1&2 needs to be amended. A portion of the existing road leading to our quarry needs to be improved. The main improvement will be made just after the road comes off the main gravel road (see enclosed map). Improvements will be made in the bottom of the wash and up the other side of the wash. A small cut will be made when going up the other side of the wash. Some other minor improvements may need to be made after I see how a large truck handles the road.

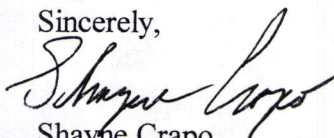

Continued operation under existing notice is located on the enclosed map. Semi trucks will be used to haul shale out of quarry. A crusher, screening plant, generator, loader, excavator, air compressor and drills will be used to produce the product.

This notice needs to be applied along with existing notice.

Proposed road improvement date: March 20, 1999.

Thank you for your assistance!

Sincerely,

  
Shayne Crapo  
Operator
